00:00 BILL ROGERS: Another form of the body's immune system going out of control is autoimmune disease. There are a huge array of autoimmune diseases from relatively common to very rare and they can be extremely complex in origin and arise from several causes. The most basic decision the immune system has to make is what is self and what is non-self for each individual. Then the defenses can all be brought to bear on the non-self invader, generally a pathogen. T-cells send to learn this lesson as they mature in the thymus. And B-cells learn in the bone marrow. About 50% of B-cells are eliminated because they don't learn the lesson properly and as many as 90% of T-cells. But even the cells that survive maturation may have incomplete abilities to recognize self, that is they still retain some tendencies to react against what is self. Other processes in the body help keep these self-reactive cells under control, but for a variety of reasons these controls can sometimes break down. When this happens the immune system can launch an all out attack on the body's own tissues either specific organs and types of tissue or a more generalized attack on many different tissues. About one in 15 Americans has some form of autoimmune disease. Some of the more common forms that we will look at briefly are Type 1 diabetes, Autoimmune hepatitis, Lupus, Myasthenia gravis and rheumatoid arthritis. There are scores more such as Crohn's

Infection Clinical and Epidemiological Study

A Simple Effective Clean Practice Protocol Significantly Improves Hand Decontamination and Infection Control Measures in the Acute Surgical Setting

D.P.J. Howard, C. Williams, S. Sen, A. Shah, J. Daurka, R. Bird, A. Loh, A. Howard

Abstract
Background: The Hand Hygiene Liaison Group and Epic Projects (Prott et al., *J Hosp Infect* 47[Suppl A], 2001) have asked specifically for further trials of educational interventions to improve hand decontamination compliance and infection control in the hospital setting. This study investigates the efficacy of a 'clean practice protocol' (CPP), derived from international guidelines, to improve compliance of infection-control practices by surgical teams in a large UK teaching hospital.
Methods: The key infection-control activities were summarized to form the CPP presented here. An undisclosed infection-control audit of consultant-led ward-rounds from breast, gastrointestinal, vascular, urological, and intensive-care departments was performed. The audit results were presented to the surgical teams, after which an education/awareness program was implemented. A repeat undisclosed audit was performed 3 months later. In both audits, infection-control activities were recorded together with consultation time and any patient infective complications.
Results: The surgical teams performed as follows in the initial audit: hand decontamination (28% of consultations,

of Joseph Lister and Dr. Ignaz Semmelweis in the mid-nineteenth century. Despite the development of many precautions against the transmission of infection, approximately one in ten patients in hospital will develop a hospital-acquired infection (HAI). A recent report estimates that annually, HAI causes 5,000 deaths and costs the health service one billion pounds in England alone with incidences of methicillin-resistant *Staphylococcus aureus* (MRSA) and *Clostridium difficile* on the rise. An individual patient with a HAI spends approximately two and half times longer in hospital, and costs £3,000 more to treat [1]. According to the World Health Organization (WHO), world-wide over 1.4 million people at any one time suffer from infectious complications acquired in hospital [2].
The emergence of antimicrobial resistant microorganisms, such as MRSA, multi-resistant Gram-negative acrobac, *C. difficile*, and enterococci, have increased the severity of HAI in patients who acquire such infections [3] and have made the task of infection control even more important. While it is unlikely that HAI can be completely eradicated, the Department of Health guidelines

Look up Subjects

The screenshot displays the 'Look up Subjects' interface. At the top, there is a search bar with the placeholder text 'Enter a name' and a 'Find' button. Below the search bar, there are radio buttons for 'Contains' (selected) and 'Begins with'. A navigation bar shows 'All' selected, followed by '0-9', 'A-C', 'D-F', 'G-H', 'J-L', 'M-O', 'P-R', 'S-U', and 'V-Z'. Below this, there is a 'Combine terms with:' section with radio buttons for 'OR' (selected) and 'AND', and an 'Add to search' button. The 'Subjects' section lists several terms with checkboxes: '11-beta-hydroxysteroid dehydrogenase type 1', '12-o-tetradecanoylphorbol-13-acetate', '14-3-3 protein', '14-3-3 proteins', and '17 beta -estradiol'. A 'Thesaurus List' overlay is positioned on the right, containing the text: 'The following thesauri are available for your currently selected database(s). Note that many thesauri are database-specific, and may limit your search results to documents from those databases.' Below this text, two thesauri are listed: 'MeSH 2016 Thesaurus' and 'ProQuest Thesaurus'. A red arrow points from the 'Find' button in the search form to the 'Thesaurus List' overlay. At the bottom of the interface, there is a 'Close' button and another 'Add to search' button.

تزاروس = اصطلاحنامه

تعریف: مجموعه ای از اصطلاحات در نظامی سلسله مراتبی به صورت اعم و اخص و مشابه و مترادف ریشه اصلی این واژه یونانی است .

در زبان فارسی = گنج واژه، واژگان نامه، واژه نامه و تزاروس

اصطلاحنامه‌ها از ابزارهای بازیابی اطلاعات در یک پایگاه اطلاعاتی هستند، نظیر MeSH در پایگاه اطلاعاتی MedLine

کاربرد اصطلاحنامه پزشکی مش

Medical Subject Headings

- ممکن است نویسندگان مقالات واژه های مختلفی برای بیان موضوع و محتوای مقاله خود به کار می برند،
- مثلاً سه نویسنده در مکان های مختلف جغرافیایی با یک فیلد تحقیقاتی ممکن است واژه های زیر را در مکان keywords مقاله خود را قید کنند:

- diabetes type I
- Insulin dependent diabetes
- diabetes mellitus, sudden onset

در اصطلاحنامه برای ایندکس کردن مقالات مشابه موضوعی، یک Subject heading یا سرفصل موضوعی استاندارد اختصاص می یابد تا کاربران به مرتب ترین مقالات موضوع خود برسند.

- موضوع استاندارد مثال فوق در اصطلاحنامه پزشکی مش Diabetes Mellitus, Insulin dependent است و تمامی مقالات مربوط به این موضوع، تحت این موضوع نمایه و جستجو می شوند.
